Image Classification

Introduction

- The problem of assigning a label to an image

Classification

CAT

Introduction

- To train Deep models, we need large-scale datasets: ImageNet
- +14M images, +21,000 classes
- Not all the dataset is useful. Instead use the Imagenet Large Scale Visual Recognition Challenge dataset (ILSVR)

Introduction

- ILSVR dataset
 - Used for competitions from 2010
 - Number of images: 1.2 Millions (200K test images)
 - Number of classes: 1000
- Evaluation metrics
 - Top-1 Accuracy: Ratio of test images whose class with max probability(algorithm output) is the correct class
 - Top-5 Accuracy: Ratio of test images whose correct class is among the five classes with highest probability(algorithm output).
